

Department of Artificial Intelligence & Machine Learning (AIML)

Student Research Achievement Report

Event Details :

Title of the Event: Student Research Achievement: Publication in Journal of Emerging Computing and Intelligent Systems

Organized By: Department of Artificial Intelligence & Machine Learning, Riverview Institute of Technology

Resource Person: Dr. Priya Nair (Mentor)

Head of Department: Information was not available in the provided WhatsApp conversation or uploaded documents.

Venue: Riverview Institute of Technology, Bengaluru

Date: 22nd July 2026

Time: Information was not available in the provided WhatsApp conversation or uploaded documents.

Participants: Information was not available in the provided WhatsApp conversation or uploaded documents.

Introduction

The Department of Artificial Intelligence & Machine Learning at Riverview Institute of Technology is dedicated to promoting research-driven learning and innovation among its students. This report highlights the recent scholarly success of Mr. Yash Malhotra, a third-year student, whose research paper has been published in a recognized journal.

This achievement underscores the department's focus on integrating advanced AI concepts with real-world applications, specifically in the domain of smart agriculture.

Objectives

The objectives of the workshop were:

1. To encourage students to engage in high-quality research and publication.
 2. To apply deep learning and explainable AI to solve agricultural challenges.
 3. To provide mentorship and academic guidance to students pursuing innovative projects.
-

Workshop Proceedings

The research project was carried out under the guidance of Dr. Priya Nair. The process involved the application of deep learning models to identify crop diseases, followed by the integration of explainable AI techniques to ensure model transparency. The research culminated in the successful publication of the findings in the Journal of Emerging Computing and Intelligent Systems.

Dr. Priya Nair, Associate Professor in the Department of AIML, served as the mentor for this research. Her expertise in AI and machine learning provided the necessary technical direction for the student to successfully navigate the research and publication process.

Mr. Yash Malhotra, a third-year student from Division B, actively participated in the research and publication process, demonstrating high levels of dedication and academic rigor.

Topics Covered

1. Deep learning techniques for crop disease identification
 2. Explainable AI (XAI) for model transparency
 3. Image-based agricultural disease detection
 4. Practical AI solutions for sustainable agriculture
-

Schedule Summary

1. Publication Date: 22nd July 2026
-

Learning Outcomes

After attending the workshop, students were able to:

1. Proficiency in implementing deep learning models for image classification.
 2. Understanding the importance of explainability in AI systems.
 3. Experience in the academic publication lifecycle.
-

Key Highlights

1. Successful publication in the Journal of Emerging Computing and Intelligent Systems.
2. Focus on practical, sustainable agricultural solutions.

3. Effective mentorship by the department faculty.

Benefits

1. Enhanced research profile for the student.
 2. Contribution to the department's research output.
 3. Practical application of theoretical AI concepts.
-

Conclusion

The publication of this research paper is a significant achievement for the Department of AIML. It validates the department's efforts in nurturing research talent and providing a platform for students to contribute to the field of artificial intelligence.

The department looks forward to supporting more such initiatives that bridge the gap between academic research and practical industry applications.

AI Executive Summary

This report documents the research achievement of Mr. Yash Malhotra, a third-year AIML student at Riverview Institute of Technology, who published a paper titled 'Explainable AI for Early Detection of Crop Diseases Using Deep Learning' in the Journal of Emerging Computing and Intelligent Systems. Mentored by Dr. Priya Nair, the research focuses on using deep learning and XAI to improve crop disease identification, contributing to smart and sustainable agriculture. This achievement highlights the department's commitment to research and innovation.

Acknowledgement

The department acknowledges the efforts of Mr. Yash Malhotra for his hard work and the guidance provided by Dr. Priya Nair. We also thank the faculty and administration of Riverview Institute of Technology for their continued support in promoting research excellence.
